

ASSISTED/LIGHT RESIDENTIAL CARE

OBJECTIVE OF THE MEASURE

Providing support and care interventions, of the residential type, to frail elderly persons, with partial limitations of autonomy, in the absence of a support network or with temporary or persistent criticality of the normal support network.

Ensuring the permanence of the person in a context that favours the maintenance of sociality, relational life and the adequate support of residual autonomy.

BENEFICIARIES

Elderly/ frail persons residing in Lombardy at home, usually aged 65 or over, who find themselves in a condition of difficulty and/or isolation due to the lack of a network able to provide adequate support at home.

TYPOLOGY AND CHARACTERISTICS OF THE MEASURE

The Measure is a project promoted by the Lombardy Region (DGR no. 7769 of 17/01/2018), which provides for hospitalisation (also of a temporary nature) for elderly persons in a fragile/partial self-sufficiency condition at the supply units provided for in the regulations.

The measure envisages the provision, in a controlled and protected environment, of socio-medical and welfare services useful to support the maintenance of the person's residual capacities, with the aim of delaying the decline in psychophysical and social conditions.

The measure guarantees the provision of socio-medical services, in addition to the socio-welfare services, already provided for by the regulations for the reception facility.

ACCESS MODES

The request for access to the measure must be submitted to the territorial ASST of reference based on the person's residence, who, with the involvement of the General Practitioner and the social service of the person's municipality of residence, carries out the assessment, prepares the Individualised Project and accompanies the person in the choice of the facility.
